

# AquaForte CompactSieve

The CompactSieve is a very versatile mechanical filter that can be used in different applications:

1. As a particle remover directly next to the pond or to a waterfall/stream return to pond.
2. As a mechanical particle waste pre-filter before surface mounted biological stages.
3. As a mechanical pre-filter for existing trickle filter systems.
4. The CompactSieve can be connected to a pond vacuum cleaner and the returned water from the vacuum cleaner can be fed into the input hose tail via a T-piece or directly. For extra particle removal and saving your precious matured pond water!
5. The CompactSieve can be connected to an existing pumped pond skimmer system. The unit must be mounted above pond water level.

## Specifications.

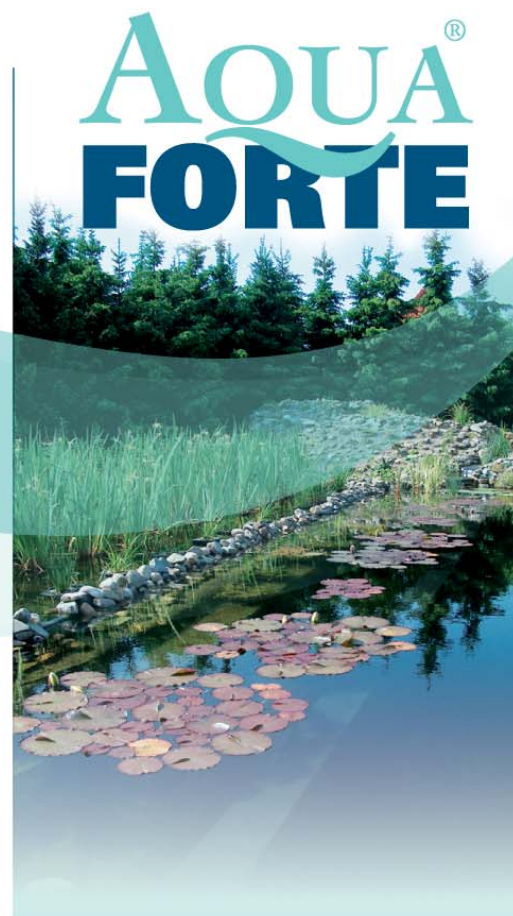

The Stainless steel filter element has a width of 24 cm and a length of 40 cm with **250 micron** openings (0,25 mm).

Maximum flow rate is approximately 15 m<sup>3</sup> per hour.

Pump inlet: 25/32/40mm stepped hose tail.

Housing: dark-green PE. Shipped with cover.  
Output and overflow: 75mm push fit fittings.

Dimension: (L) 50 x (W) 33 x (H) 56 cm, weight: ± 9 Kilo.
